

Set Up An AWS Account

Jerry Castrudes

Introducing Today's Project!

In this project, I'm going to set up my own AWS account, learn about the AWS Free Tier, and configure billing alerts to avoid surprise charges.

Key tools and concepts

The key tools I used include user credentials, setting up billing alerts, and MFA to secure my account. Key concepts I learnt include setup billing account to prevent surprise charges and adding MFA to secure my account and to prevent unauthorized access.

Challenges and wins

This project took me approximately 20 minutes. The most challenging part was adding MFA to secure the account.

Creating My AWS Account

In this step, I'm going to create my own new AWS account, then verify my email address, and then create a strong root password.

Understanding the root user

I learned that the root user is the main account of my AWS account. It must have a strong password to prevent unauthorized access.

Setting Up Billing and Payment

In this step, I'm going to set up my billing account, from selecting my free tier to adding a payment method to verify my account.

Why AWS requires a payment method

I learned that AWS requires a payment method to verify the account identity.

A circular profile picture of a person with short, light-colored hair and a red bow or accessory on the left side.

Completing Account Activation

In this step, I'm going to confirm my identity and select a support plan.

Identity verification and support plan

I verified my identity using MFA. The Basic support plan includes access to AWS documentation, forums, and AWS Trusted Advisor checks. It is more than enough for learning and personal projects.

Enabling Free Tier Alerts

In this step, I'm going to enable free tier billing alerts for my account to get an email whenever my free tier gets close.

Alert preferences Info

Edit

AWS Free Tier alerts

CloudWatch billing alerts
⊖ Not delivered

Why usage alerts matter

I set up usage alerts to notify me whenever my account is close to exceeding my Free Tier limit.
